

Supression Coils

77A Series

Suppression coils 77A series are axial with ferrite core. They come with high rated currents and low DC resistance characteristics. Inductance tolerance is 20%.

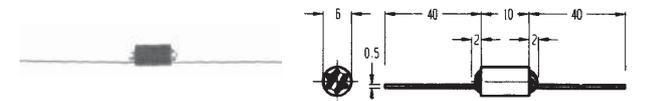

Applications: in communication: RF blocking, filtering and decoupling, and others: entertainment electronics and interference suppression

06H Series

FASTRON wide band chokes are ferrite beads wound with a thin copper wire. These 6 hole beads provide a constant current. They are commonly use in burner and signal filtering applications and protect against radio frequency interface s of components on PCB's

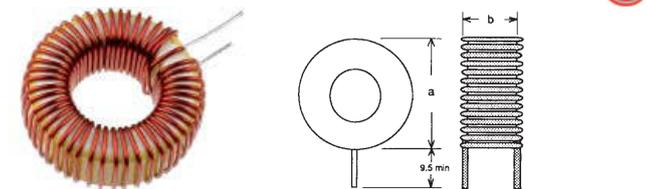

Applications: to filter external EMI; reduction of radiated interference and TV receivers; voltage supply for high load currents

DPU Series

This series of chokes is made with a toroid core in iron powder (IP). Used in EMI filtering and energy storage, these compact, low radiation inductors are extremely effective in controlling AC output ripple of Switch Mode Power Supplies. Designed for supression up to 200kHz.

DTP Series

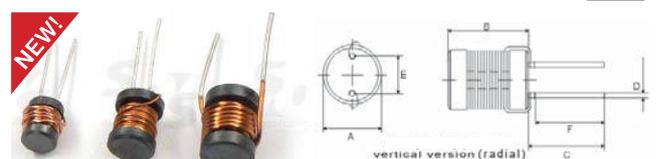

DTP chokes, used as a EMI suppression and energy storage chokes, are wound on toroidal iron powder cores. Energy storage chokes are based on iron powder cores, whose individual powder particles are insulated from one another, allowing the cores to have inherently distributed air gaps for energy storage in an inductor. Distributed air gap property ensures that the energy are stored evenly through the core. This makes the core have a better temperature stability.
